AR With Layar Creator

Fast & Easy Augmented Reality Creation

Augmented Reality (AR) can seem like magic but there are a growing number of creation tools that make it easy and fun for everyone to get started making their own. Layar Creator is a simple drag-and-drop interface available online. Here’s how to get started:

1. **Layar Creator**
   
   Sign up and sign in at Layar Creator at http://layar.com/creator

2. **New Campaign**

   Create a new campaign. The image you upload is your “target” image - this is what you will point your camera at to see the Augmented Reality. The image should have a good amount of detail. Choose carefully - you can delete but not edit this target. Layar will check your image to make sure it will work well.

3. **Build the AR content.**

   - Drag & drop buttons onto target image

   Note: There is a fee for removing ads from Layar pages but you can apply to have this waived for educational projects.

   - CLICK ON BUTTONS TO EDIT OR DELETE

4. **Save Page**

5. Open the Layar App on your mobile device, hold the camera over a printed version of your target image.

**WHAT YOU WILL NEED**

- camera enabled mobile device
- Layar App installed on your mobile device http://layar.com/download
- digital image (jpg or png)
- web browser
- an account at http://layar.com
- content for AR layer: links, video, images, social media, etc.
